

CUSTOMER FEEDBACK SENTIMENT ANALYSIS REPORT

Submitted By

Name: MEHA MARY SAMUVEL

Domain: Data Analytics

1. Introduction

Customer Feedback Sentiment Analysis is a data analytics project used to analyze customer reviews and classify them as positive or negative. The project helps businesses understand customer satisfaction and improve services using sentiment analysis techniques.

2. Objective

The main objective of this project is to analyze customer feedback and identify sentiments using data analytics and natural language processing techniques. The project helps understand customer opinions, satisfaction levels, and areas that need improvement.

3. Tools Used

- Python
- Pandas
- Matplotlib
- TextBlob
- Google Colab

5. Steps Performed

Step 1: Data Loading

The CSV dataset was loaded using Pandas.

Step 2: Data Cleaning

- Checked missing values
- Verified dataset structure

Step 3: Sentiment Analysis

TextBlob library was used to analyze customer reviews and classify sentiments as:

- Positive
- Negative

Step 4: Data Visualization

A sentiment count graph was created to visualize positive and negative reviews.

6. Charts Included

- Customer Feedback Sentiment Bar Graph

7. Observations

- Positive reviews are higher than negative reviews.
- Sentiment analysis helps understand customer satisfaction.
- Negative feedback helps identify service issues.
- Customer reviews are useful for business improvement.

8. Conclusion

The project successfully analyzed customer feedback using sentiment analysis techniques. The analysis helps businesses improve customer experience and make better decisions based on user opinions.
